- <> Enterprise Strength Taxonomy Development.
- <> Rock Solid Foundations For Your Vital Work.
- <> True Multi-User.
- <> Extend your collaboration worldwide. Full TRAX integration.
- <> Join the Interactive Data Revolution.

## WANT TO KNOW MORE ABOUT XBRL 2.1 COMPLIANCE UNDER TRUE NORTH™?

Also available in this series of product leaflets you will find a True North™ Product Overview.

Alternatively, visit our website:

[www.corefiling.com/products/truenorth](http://www.corefiling.com/products/truenorth)

Whether defining a national GAAP framework, describing corporate reporting policies or creating proprietary analytics, if you are working in XBRL you are building a taxonomy. Build it with confidence using SpiderMonkey™. Use our free licensed version for simple jobs, the personal version for harder ones, or the enterprise version for large scale enterprise or industry-wide collaborative initiatives.

### WHAT IS SPIDERMONKEY?

SpiderMonkey provides the fundamental building block on which to build an enterprise-strength taxonomy. It heralds a new era of taxonomy development, standing apart as the first taxonomy editor to include integrated revision control, multi-user support and public review capabilities. SpiderMonkey is designed for use by subject matter experts, providing a user-friendly interface to simplify the creation of the detailed concept definitions behind the most complex financial reporting system. It allows these experts to concentrate on content rather than trying to understand the underlying technology. However, whether you are planning a small taxonomy project needing swift implementation or embarking on a complex, enterprise-wide financial consolidation project using an XBRL taxonomy to control the process, SpiderMonkey comes in a version to suit your needs. It is already the taxonomy development tool of choice in some of the most advanced XBRL projects in the world.

### WHAT MAKES SPIDERMONKEY SPECIAL?

#### Multi-user environment

SpiderMonkey is unique. It is the only taxonomy development tool on the market designed from the beginning to enable multiple developers to work simultaneously. Traditionally, taxonomy development can be a laborious process. Using modern revision control techniques, SpiderMonkey allows large numbers of users to connect to the same repository and work with the same definitions.

So, why not break the mould and increase the productivity of your taxonomy team? Originally developed in conjunction with a major financial sector client, SpiderMonkey is now deployed in a growing number of taxonomy projects around the globe.

## WHO USES SPIDERMONKEY?

SpiderMonkey was launched in December 2006 and is already in active use within a growing number of major organisations who have committed to the XBRL standard.

SpiderMonkey supports the global equity research business of a major **Wall Street investment bank**, considered to have one of the most complex and most ambitious taxonomies in the banking environment.

The **Netherlands Taxonomy Project (NTP)** is a ground-breaking initiative of the Dutch government which is using XBRL to streamline the financial reporting required by a range of government agencies. The unique multi-user approach offered by SpiderMonkey, together with its advanced data modelling techniques, seamlessly coordinating the requirements of the individual agencies, have helped NTP to create its complex taxonomy.

The SEC-funded **XBRL-US Taxonomy Project**.

## Rock solid foundations

SpiderMonkey is based on the open source Eclipse development platform, originally developed by IBM, enabling further extension and customisation using the supported plug-ins. It produces taxonomies that are fully conformant to the XBRL 2.1 specification, being underpinned by TrueNorth, widely regarded as the most accurate implementation of the XBRL 2.1 specification on the market.

## Start small and grow

Choose from a range of packages adapted to a wide variety of user needs. Whether you are planning a small project to develop an extension taxonomy or creating an integrated national taxonomy architecture, we have the tools to help you succeed.

Start with a completely free, no-strings attached single user desktop version, and build up to an enterprise-level, repository-backed multi-user version.

## Here to help

CoreFiling's interest does not terminate once you have committed to the product. Our support team remains constantly available to answer your queries and provide that all-important advice and guidance. And for more complex projects we provide expert implementation consultancy to ensure your success.

## DISCOVER SPIDERMONKEY TODAY!

SpiderMonkey is now available as a **completely free, no-strings attached** single user desktop version, downloadable from the CoreFiling website. Simply go to [www.corefiling.com/products/spidermonkey](http://www.corefiling.com/products/spidermonkey), sign up for a free copy and start exploring why SpiderMonkey is creating such a stir amongst business experts.

## WHAT OTHER TOOLS ARE AVAILABLE?

**SpiderMonkey™** forms part of an extended XBRL product family, also including:

**True North™** - the Gold Standard in XBRL processing and validation

**TRAX™** - on-line collaboration tool for taxonomy definition

**ReportDirect™** - data collection and workflow

**EarningsDirect™** - unambiguous reporting of earnings data

**IFS™** - tagging of financial reports for instant, accurate and unambiguous disclosure

## ABOUT COREFILING

CoreFiling provides innovative XBRL solutions and services designed to streamline online financial reporting. The company now incorporates the engineering expertise of DecisionSoft, an organisation renowned for its design, publication and validation of XML and XBRL. The newly amalgamated company offers unparalleled XBRL products and consulting skills, from taxonomy design and benchmark quality XBRL processing to data workflow enhancement and instance document processing. CoreFiling is privately held. Major shareholders include Business Wire, the global leader in financial news distribution, a wholly owned subsidiary of Berkshire Hathaway.
